

Release Notes

NITRO-SDK Wi-Fi Library

2007/03/09

Nintendo Co., Ltd.

Version: NitroWiFi-2.0

About This Package

This package is the basic library set for the development of network applications that use the wireless communications functionality of the Nintendo DS (development code: NITRO). The library provides a variety of APIs that improve the efficiency of NITRO application development.

What Is Included in This Package

- The NITRO-SDK Wi-Fi library (TCP/IP protocol stack, SSL protocol stack, wireless connection management, etc.)
- An online version of Function Reference Manual
- Demo programs for library features

Notes

- This package supports NITRO-SDK 4.0 and later.
- This package supports CodeWarrior for NINTENDO DS Version 2.0 SP1 and later.

Changes

The following changes were made to the various packages released prior to NITRO-SDK Wi-Fi-2.0. For more detailed information, please refer to the change history section specific to the NITRO-SDK Wi-Fi Library 2.0 in the online Function Reference Manual.

- The version of CodeWarrior used to build the NITRO-SDK Wi-Fi package has been changed to 2.0 SP1.
- The format of all source code for libraries and sample demos has been standardized in terms of indentations and carriage returns.
